VaR Backtesting - Accuracy of VaR Methodology

The methodology is designed to estimate the level of loss that would be exceeded no more than 5% of the time. The graph shows the actual incidence of losses that are greater than the estimated VaR ("VaR Exceptions"). If the methodology is sound, the incidence of VaR exceptions should in the long run average 5%.

VaR - Reliance on beneficial correlation between Traders

The VaR of BHMFL takes account of beneficially low correlations between traders. To account for situations where these correlations change sharply BHAM calculates the VaR assuming all traders are 100% correlated. This fully correlated VaR has usually been between 1.5 and 3 times the size of the regular VaR

At 27 Feb 2009	BHMFL VaR (a)	0.6%
	Sum of trader VaR's (b)	1.1%
	Ratio (b/a)	1.91
